

Light Millennium

Blue Sky Technologies are proud to present the Light Millennium, the pinnacle of sliding door automation. High quality materials and innovative technological solutions are combined with the simplicity of installation, use and maintenance to provide the perfect service for your needs. The light weight materials mean that the price remains competitive whilst still being

Lightweight and discreet

robust and ready for any heavy duty passageway.

Sliding door automation made simple

The Light Millennium provides power, safety and reliability encased in an attractive aluminium housing only 10cm high.

Heavy duty for busy doorways

The Light Millennium provides the most comprehensive

range of features that could be required in an automatic door operator. The robust construction and precise microprocessor technology make this sliding operator the premier choice for automatic sliding door solutions.

The versatility of the Light Millennium integrates beautifully with today's modern building designs, linking effortlessly with access control, fire alarms and control systems.

Heavy duty steel brackets, reinforced toothed belt and a high quality extruded housing make this operator suitable for heavy and high usage door sets.

Function is achieved by designing into this elegant profile suite the very latest components, ensuring the longevity of this solution.

A polyamide track, with reinforced nylon tandem rollers, has a precision adjustment mechanism which means that the same components can be used on all sizes of doors. This also serves to ensure long-term ease of maintenance as well as allowing for fabrication, profile and track tolerances. This is borne out by the testing in wet and sandy conditions of over 200,000 open/close cycles.

The strength of the system is proven through the capability to carry 180kg of weight per roller. For applications where safety is a concern, door restrictors can be fitted to the door at increments to suit the application.

Made to fit any doorway

- Basic functions selector
- Advanced functions selector with LCD display (password lock system)
- Power battery system
- Break-away doors system
- Electric locking system
- Tamper-proof key for night closing
- Microwave radar
- Passive and/or active infrared sensor
- Single or double field safety photocell
- Push button
- Brackets for toughened glass doors
- Floor guides
- Electronic key for access control
